A GRAND NOVELTY FOR 1908.

Primula Obconica Gigantea Kermesima.

This new Giant-Flowered Primula Obconica is a cross between P. Obconica Grandiflora and the Chinese Primula Megasaefolia.

The thick leathery dark-green leaves are roundish; their edges undulating, attain a diameter of 6 inches. The flower stalks are very strong, almost as thick as a pencil and are like the leaf stalks covered with curly hair.

The well-formed flowers are 1 inch and over in diameter and are borne in handsome round clusters up to 5 inches across. With good culture this Primula attains giant dimensions and is equally valuable for pot and cut-flower culture.

The color of the flowers is bright carmine.

Pkt., 30c.; 3 pkts. for 75c.

PRIMULA OBCONICA GIGANTEA ROSEA.

Flowers are bright rose, (much better color than the type.)

Pkt., 200 seeds, 25c.; 3 for 65c.
